Restraints in Phenix

Generating & modifying for all scenarios

Nigel W. Moriarty

User's Meeting
University of Kansas, November 2023

What are restraints?

- Restraints are harmonic functions that provide (mostly) chemical information via residuals & gradients

- Needed because experimental data is rarely sufficient for structure determination

- Weighted with the experimental information to find the optimal result
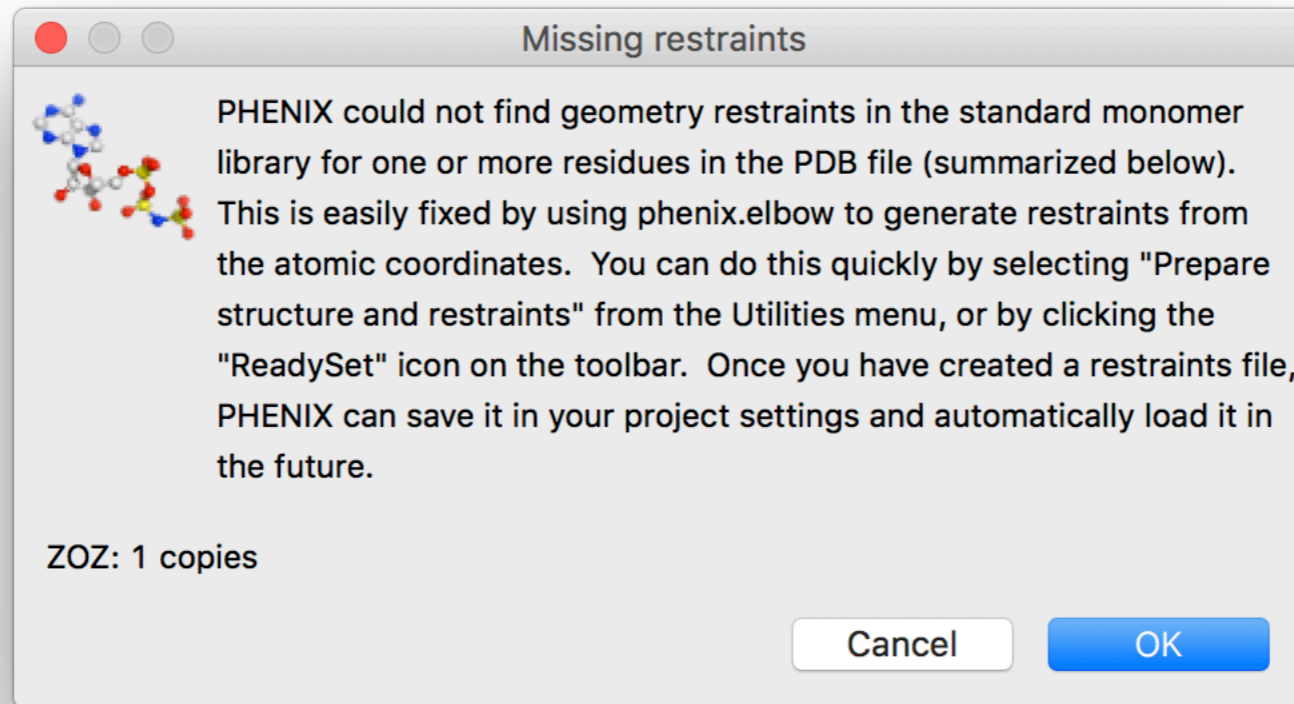

Restraints in Action

- Libraries

  - Monomer Library

  - GeoStd

- Algorithms

  - Polymer

  - Links

GeoStd

- All standard amino acids

- Current list of non-standard amino acids

- All standard RNA/DNA

- Current list of non-standard RNA/DNA

- Others

What you will see

Or

```
Sorry: Fatal problems interpreting model file:
  Number of atoms with unknown nonbonded energy type symbols: 21
    Please edit the model file to resolve the problems and/or supply a
    CIF file with matching restraint definitions, along with
    apply_cif_modification and apply_cif_link parameter definitions
    if necessary.
```

CIF

- Crystallographic Information File

- mmCIF – macro-molecular CIF

- Used for

  - Model

  - Data

  - Maps

  - Ligands

    - Information

    - Restraints

Confusion

- All depositions of X-ray model use mmCIF from 1 July 2019

- "I need a CIF file."

  - But what do you really need?

Restraints?

- Provide a reasonable geometry during refinement particularly at low resolution

    - Bonds, angles, dihedrals, chirals, planes, …

- Must be weighted against the experimental information

Overview

- eLBOW - electronic Ligand Builder & Optimisation Workbench

- ReadySet! - One-stop preparation for your refinement needs

- REEL - Restraints Editor Essentially Ligands

Ligands in crystallography

Generate ligand restraints

↓

Fit ligand to density → Refine macromolecule and ligand

Phenix
eLBOW goals

- Fast, simple and flexible procedure to include ligands
- Reduce the tedium of building 3D ligand models
- Automate generation of restraints for ligands
- Comparison of ligand structures

Chemical input
Reflection data
Protein information

Chemical restraints (CIF)
Cartesian coordinates (PDB)

Phenix

# Optimisation

Getting ready to refine

- Many details needed to prepare for structure refinement

Chemical input

Chemical restraints (CIF)
Cartesian coordinates (PDB)
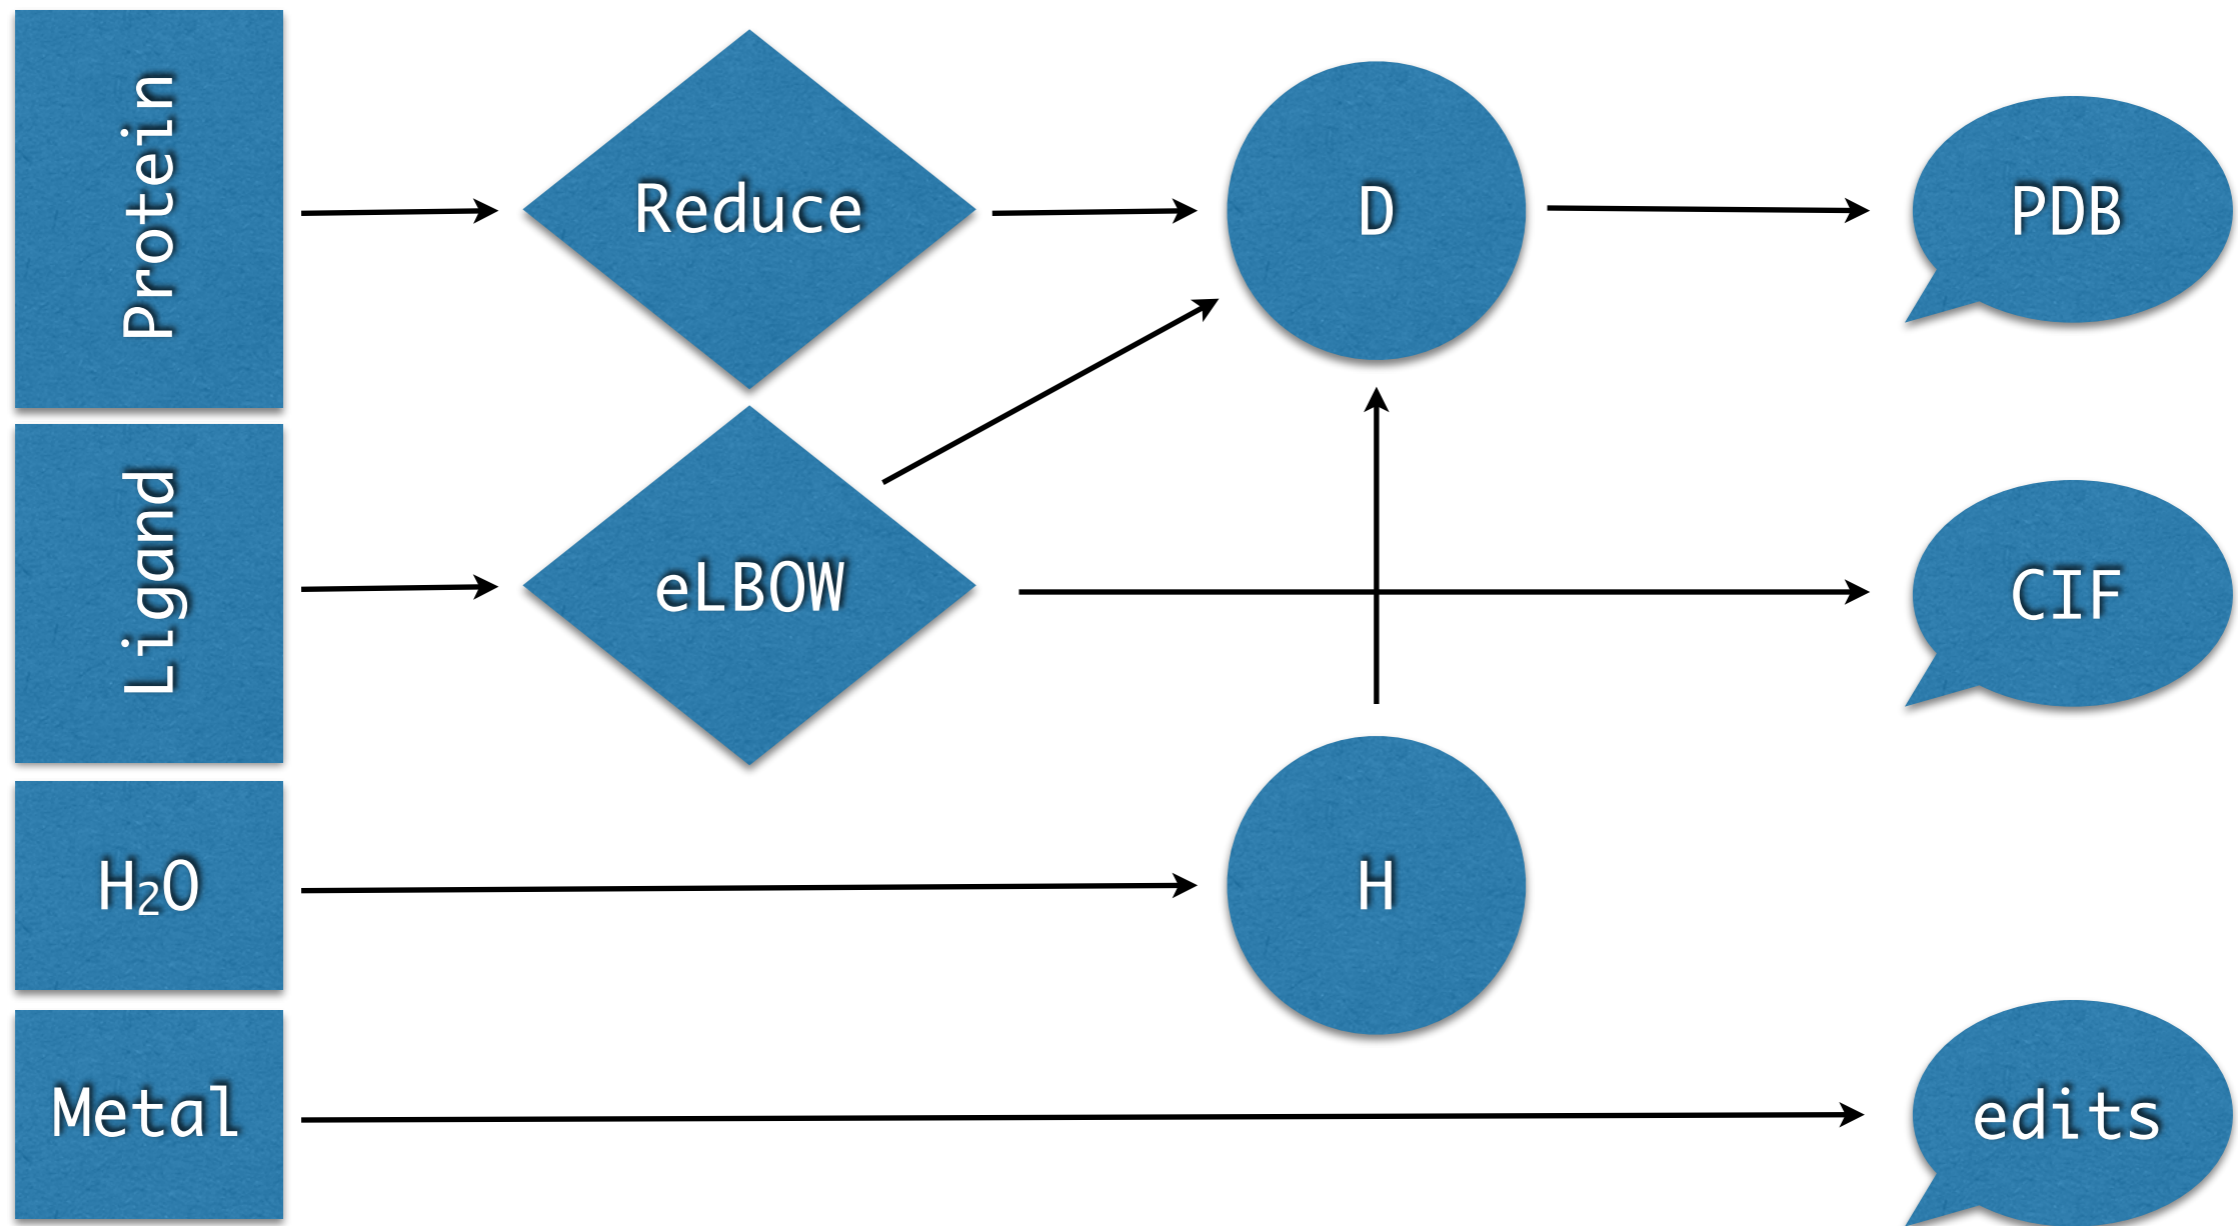

Protein Information

ReadySet!

Experimental data

refinement

Phenix

BERKELEY LAB
Lawrence Berkeley National Laboratory

ReadySet!

- Add hydrogens

  - Default: adds hydrogens to protein, ligands

    - Protein - Reduce

    - Ligands - eLBOW

  - Add hydrogens to water

  - Add deuteriums instead of hydrogens

  - Add hydrogen & deuteriums appropriately

- Generate restraints

ReadySet!

ReadySet!

- Restraints CIF filename

- Restraints CIF directory

- LINKS to "edits"

- --dry-run to show ligand process pathway

- Metal coordination

Ligand Fitting

Approach

- Where is the ligand?

  - Choose the largest region of contiguous density

- What are rotatable bonds?

  - Analyze ligand for allowed rotations

- What is the orientation of the ligand?

  - Fit core of ligand

- What is the conformation of the ligand?

  - Trace the ligand out from the core

Phenix

Automated Ligand Fitting

The best fit is measured using the correlation of the model to the electron density
... and extend the model into the density

FFT methods are used to rapidly fit fragments to density

The extension uses rotation around torsion angles to find the best fit

Choose largest rigid fragments of ligand

... and identify their best locations

Take each best location...

Phenix

Results

- Based on 6209 PDB entries with 9319 ligands

	Ligands in PDB fitting Fo-Fc map with CC ≥ 0.75	All Ligands
Number of ligands	6590	9319
Mean CC of ligand in PDB	0.85	0.78
Mean CC of fitted ligand (unrefined)	0.76	0.72
Rmsd ≤ 1.0 Å	2715 (41%)	3004 (32%)
Rmsd ≤ 2.0 Å	4666 (71%)	5421 (58%)
Rmsd > 10 Å	310 (5%)	1417 (15%)

BERKELEY LAB
Lawrence Berkeley National Laboratory

Phenix

Restraints in phenix.(real_space_)refine

- LINK records have no impact

- Automatically accesses the "standard" residues restraints

- Automatically links the "standard" residues

- Parameter "link_all=True" links

  - Covalent ligands

  - Carbohydrates

  - Metal ions

BERKELEY LAB
Lawrence Berkeley National Laboratory

Phenix

phenix.(real_space_)refine (continued)

- RNA/DNA restraints

  - Base pair hydrogen bonding

  - Base pair planarity

  - Base stacking (parallelity)

- Secondary Structure restraints

- NCS restraints

- Custom bonds & angles using edits

- Restraints are written to .geo file including non bonded interactions

QM Restraints

- Generates restraints of ligands using Quantum Mechanics *in situ*

- There are two ways of using QMR

  - In *phenix.refine*

  - In a standalone program *mmtbx.quantum_interface*

- Python2 needs $PHENIX_MOPAC

- For ORCA, set $PHENIX_ORCA

QMR

In situ restraints generation

- Carve out the ligand environment

- Minimise the ligand geometry *in situ*

- Transfer geometry values to restraints (and write to disk)

- Refinement with modified restraints

```

In situ

Summary

- eLBOW & ReadySet! perform better when provided with better input. (GIGO)

- Need to know something about the ligand

  - Hierarchy of input file value

- Check your .geo file for confirmation of restraints
